1) setup signing settings:

2) setup config (Config.swift):

```
器 く >
                                            Super Agent > Super Agent > Config.swift > No Selection
▼ Buper Agent
 Super Agent.entitlements
     EasyListParser

```

3) setup constants (Constants.swift):

```
import Foundation
      Super Agent
                                                                         struct Constants {
    static let filtersSources: [FilterSource] = [
                                                                                       FilterSource(name: "AdGuard Tracking Protection 1",
url: "https://filters.adtidy.org/ios/filters/15_optimized.txt",
description: "The most comprehensive list of various online counters and web analytics tools"
        Models
ViewControllers
Cells
                                                                                                               free: true,
                                                                                       FilterSource(name: "AdGuard Tracking Protection 2",
url: "https://filters.adtidy.org/ios/filters/3_optimized.txt",
description: "The most comprehensive list of various online counters and web analytics tools"
       AppDelegate.swift
       Config.swift
                                                                                                               free: true,
activate: false),
                                                                                       FilterSource(name: "AdGuard Tracking Protection 3",
url: "https://filters.adtidy.org/ios/filters/3_optimized.txt",
description: "The most comprehensive list of various online counters and web analytics tools"
       BlockManager.swift
                                                                                       activate: false,
activate: false),
FilterSource(name: "AdGuard Tracking Protection 4",
url: "https://filters.adtidy.org/ios/filters/4_optimized.txt",
description: "The most comprehensive list of various online counters and web analytics tools'
       nfo.plist
     Products
Pods
Frameworks
                                                                                                               free: true,
activate: false)
Pods
                                                                                       static let privacyPolicy = ""
static let termsOfUse = ""
                                                                                static let supportEmail = ""
```

- 1 You should add your filters in filtersSources: example:

```
FilterSource(name: "AdGuard Tracking Protection 1", // Filter name
url: "https://filters.adtidy.org/ios/filters/15_optimized.txt", // Filter url
description: "The most comprehensive list", // Filter description shows in UI
free: true, // Free or Premium list
activate: true), // Is avtivate by default
```

Please use list like this: https://filters.adtidy.org/ios/filters/15 optimized.txt (same format)

- 2 For AppStore rules you need to add privacy policy url, terms of use url and support email

```
struct Links {
    static let privacyPolicy = ""
    static let termsOfUse = ""
}
static let supportEmail = ""
```
